CANADIAN CENTRE FOR CYBER SECURITY

COMMON CRITERIA CERTIFICATION REPORT

Lexmark CX730, CX930, CX931 and MX931 Multi-Function Printers with Trusted Platform Module and Hard Drive and without Fax and with Firmware Version 081.234

23 June 2023

588-EWA

Canada

FOREWORD

This certification report is an UNCLASSIFIED publication, issued under the authority of the Chief, Communications Security Establishment (CSE).

The Information Technology (IT) product identified in this certification report, and its associated certificate, has been evaluated at an approved testing laboratory established under the Canadian Centre for Cyber Security (a branch of CSE). This certification report, and its associated certificate, applies only to the identified version and release of the product in its evaluated configuration. The evaluation has been conducted in accordance with the provisions of the Canadian Common Criteria Program, and the conclusions of the testing laboratory in the evaluation report are consistent with the evidence adduced.

This report, and its associated certificate, are not an endorsement of the IT product by Canadian Centre for Cyber Security, or any other organization that recognizes or gives effect to this report, and its associated certificate, and no warranty for the IT product by the Canadian Centre for Cyber Security, or any other organization that recognizes or gives effect to this report, and its associated certificate, is either expressed or implied.

If your organization has identified a requirement for this certification report based on business needs and would like more detailed information, please contact:

Canadian Centre for Cyber Security
Contact Centre and Information Services
contact@cyber.gc.ca | 1-833-CYBER-88 (1-833-292-3788)

OVERVIEW

The Canadian Common Criteria Program provides a third-party evaluation service for determining the trustworthiness of Information Technology (IT) security products. Evaluations are performed by a commercial Common Criteria Testing Laboratory (CCTL) under the oversight of the Certification Body, which is managed by the Canadian Centre for Cyber Security.

A CCTL is a commercial facility that has been approved by the Certification Body to perform Common Criteria evaluations; a significant requirement for such approval is accreditation to the requirements of ISO/IEC 17025, the General Requirements for the Competence of Testing and Calibration Laboratories.

By awarding a Common Criteria certificate, the Certification Body asserts that the product complies with the security requirements specified in the associated security target. A security target is a requirements specification document that defines the scope of the evaluation activities. The consumer of certified IT products should review the security target, in addition to this certification report, to gain an understanding of any assumptions made during the evaluation, the IT product's intended environment, the evaluated security functionality, and the testing and analysis conducted by the CCTL.

The certification report, certificate of product evaluation and security target are posted to the Common Criteria portal (the official website of the International Common Criteria Program).

EXECUTIVE SUMMARY

Lexmark CX730, CX930, CX931 and MX931 Multi-Function Printers with Trusted Platform Module and Hard Drive and without Fax and with Firmware Version 081.234 (hereafter referred to as the Target of Evaluation, or TOE), from **Lexmark International, Inc.** , was the subject of this Common Criteria evaluation. A description of the TOE can be found in Section 1.2. The results of this evaluation demonstrate that the TOE meets the requirements of the conformance claim listed in Section 1.1 for the evaluated security functionality.

EWA-Canada is the CCTL that conducted the evaluation. This evaluation was completed on **23 June 2023** and was carried out in accordance with the rules of the Canadian Common Criteria Program.

The scope of the evaluation is defined by the Security Target, which identifies assumptions made during the evaluation, the intended environment for the TOE, and the security functional/assurance requirements. Consumers are advised to verify that their operating environment is consistent with that specified in the security target, and to give due consideration to the comments, observations, and recommendations in this Certification Report.

The Canadian Centre for Cyber Security, as the Certification Body, declares that this evaluation meets all the conditions of the Arrangement on the Recognition of Common Criteria Certificates and that the product is listed on the Certified Products list (CPL) for the Canadian Common Criteria Program and the Common Criteria portal (the official website of the International Common Criteria Program).

1   IDENTIFICATION OF TARGET OF EVALUATION

The Target of Evaluation (TOE) is identified as follows:

Table 1:   TOE Identification

TOE Name and Version	Lexmark CX730, CX930, CX931 and MX931 Multi-Function Printers with Trusted Platform Module and Hard Drive and without Fax and with Firmware Version 081.234
Developer	Lexmark International, Inc.

1.1   COMMON CRITERIA CONFORMANCE

The evaluation was conducted using the Common Methodology for Information Technology Security Evaluation, Version 3.1 Revision 5, for conformance to the Common Criteria for Information Technology Security Evaluation, Version 3.1 Revision 5.

The TOE claims the following conformance:

Protection Profile for Hardcopy Devices, v1.0, 10 September 2015

Protection Profile for Hardcopy Devices, v1.0 Errata #1, June 2017

1.2   TOE DESCRIPTION

The TOE is a multi-functional printer system with scanning and networked capabilities. The capabilities extend to walk-up scanning and copying and servicing print jobs through the network. The TOE features an integrated touch-sensitive operator panel.

1.3   TOE ARCHITECTURE

A diagram of the TOE architecture is as follows:

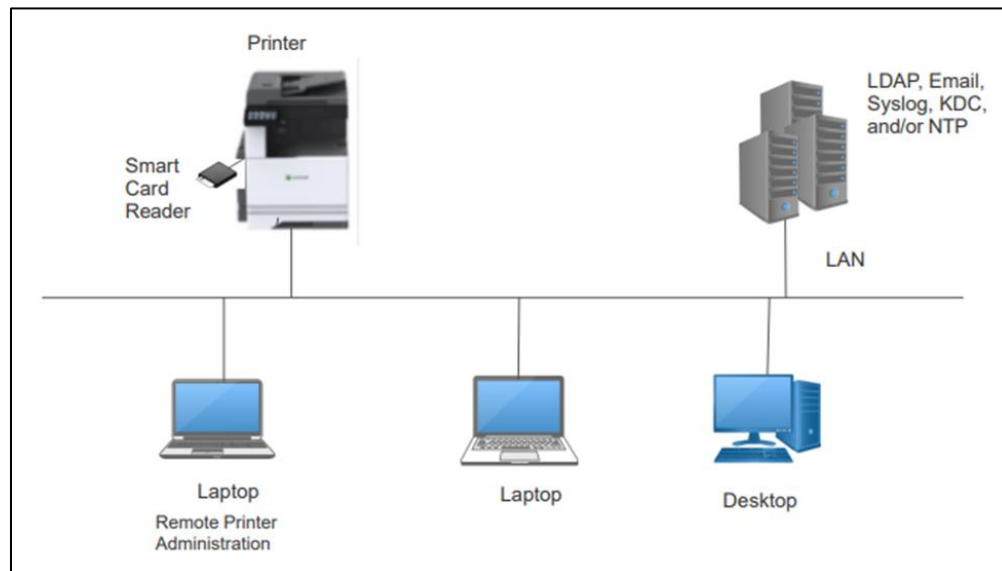

Figure 1: TOE Architecture

2   SECURITY POLICY

The TOE implements and enforces policies pertaining to the following security functionality:

- Security Audit
- Cryptographic Support
- User Data Protection
- Identification and Authentication
- Security Management
- Protection of the TSF
- TOE Access
- Trusted Path/Channels
- Storage Data Encryption
- Image Overwrite

Complete details of the security functional requirements (SFRs) can be found in the Security Target (ST) referenced in section 8.2.

2.1   CRYPTOGRAPHIC FUNCTIONALITY

The following cryptographic implementations are used by the TOE and have been evaluated by the CAVP:

Table 2:   Cryptographic Implementation(s)

Name	Certificate Number
Lexmark Crypto Module version 3.5 (User)	A2315
Lexmark Crypto Module version 3.5 (Kernel)	A2309

3 ASSUMPTIONS AND CLARIFICATION OF SCOPE

Consumers of the TOE should consider assumptions about usage and environmental settings as requirements for the product's installation and its operating environment. This will ensure the proper and secure operation of the TOE.

3.1 USAGE AND ENVIRONMENTAL ASSUMPTIONS

The following assumptions are made regarding the use and deployment of the TOE:

- Physical security, commensurate with the value of the TOE and the data it stores or processes, is assumed to be provided by the environment.
- The Operational Environment is assumed to protect the TOE from direct, public access to its LAN interface.
- TOE Administrators are trusted to administer the TOE according to site security policies.
- Authorized Users are trained to use the TOE according to site security policies.

3.2 CLARIFICATION OF SCOPE

The following functionality is supported in the product but is not included in the evaluation:

- Common Access Card (CAC) and Secret Internet Protocol Router Network (SIPRNet) cards.
- Identiv uTrust 2700 R Contact Smart Card Reader, Omnikey 3121 SmartCard Reader, and any other Omnikey SmartCard readers that share the same USB Vendor IDs and Product IDs with the Omnikey 3122.

4   EVALUATED CONFIGURATION

The evaluated configuration for the TOE comprises: firmware version 081.234 on the hardware models and configurations listed the table below.

TOE Software/Firmware	081.234
TOE Hardware	MX931dse, CX730de, CX930dse, CX931dse, CX931dtse
Environmental Support	LDAP server, syslog server, NTP server, email server, key distribution centre, smart card reader

4.1   DOCUMENTATION

The following documents are provided to the consumer to assist in the configuration and installation of the TOE:

a) Lexmark Common Criteria Installation Supplement and Administrator Guide, December 2022.
b) Lexmark Embedded Web Server – Security Administrator's Guide, May 2022.
c) Lexmark MX931 MFP User's Guide, May 2022.
d) Lexmark CX730, CX735 XC4342, XC4352 MPFs User's Guide, February 2022.
e) Lexmark CX930, CX931, XC9325, XC9335 MFPs User's Guide, May 2022.

5 EVALUATION ANALYSIS ACTIVITIES

The evaluation analysis activities involved a structured evaluation of the TOE. Documentation and process dealing with Development, Guidance Documents, and Life-Cycle Support were evaluated.

5.1 DEVELOPMENT

The evaluators analyzed the documentation provided by the vendor; they determined that the design completely and accurately describes the TOE security functionality (TSF) interfaces and how the TSF implements the security functional requirements. The evaluators determined that the initialization process is secure, that the security functions are protected against tamper and bypass, and that security domains are maintained.

5.2 GUIDANCE DOCUMENTS

The evaluators examined the TOE preparative user guidance and operational user guidance and determined that it sufficiently and unambiguously describes how to securely transform the TOE into its evaluated configuration and how to use and administer the product. The evaluators examined and tested the preparative and operational guidance and determined that they are complete and sufficiently detailed to result in a secure configuration.

Section 4.1 provides details on the guidance documents.

5.3 LIFE-CYCLE SUPPORT

An analysis of the TOE configuration management system and associated documentation was performed. The evaluators found that the TOE configuration items were clearly marked.

The evaluators examined the delivery documentation and determined that it described all the procedures required to maintain the integrity of the TOE during distribution to the consumer.

6   TESTING ACTIVITIES

Testing consists of the following three steps: assessing developer tests, performing independent tests, and performing a vulnerability analysis.

6.1   ASSESSMENT OF DEVELOPER TESTS

The evaluators verified that the developer has met their testing responsibilities by examining their test evidence, and reviewing their test results, as documented in the Evaluation Test Report (ETR). The correspondence between the tests identified in the developer's test documentation and the functional specification was complete.

6.2   CONDUCT OF TESTING

The TOE was subjected to a comprehensive suite of formally documented, independent functional and penetration tests. The detailed testing activities, including configurations, procedures, test cases, expected results and observed results are documented in a separate Test Results document.

6.3   INDEPENDENT TESTING

During this evaluation, the evaluator developed independent functional & penetration tests by examining design and guidance documentation.

All testing was planned and documented to a sufficient level of detail to allow repeatability of the testing procedures and results. The following testing activities were performed:

a.   PP Assurance Activities: The evaluator performed the assurance activities listed in the claimed PP.
b.   Cryptographic Implementation Verification: The evaluator verified that the claimed cryptographic implementations were present and used by the TOE.

6.3.1   INDEPENDENT TESTING RESULTS

The developer's tests and the independent tests yielded the expected results, providing assurance that the TOE behaves as specified in its ST and functional specification.

6.4   VULNERABILITY ANALYSIS

The vulnerability analysis focused on 4 flaw hypotheses.

- ◉ Public Vulnerability based (Type 1)
- ◉ Technical community sources (Type 2)
- ◉ Evaluation team generated (Type 3)
- ◉ Tool Generated (Type 4)

The evaluators conducted an independent review of all evaluation evidence, public domain vulnerability databases and technical community sources (Type 1 & 2).   Additionally, the evaluators used automated vulnerability scanning tools to discover potential network, platform, and application layer vulnerabilities (Type 4).   Based upon this review, the evaluators formulated flaw hypotheses (Type 3), which they used in their vulnerability analysis.

Type 1 & 2 searches were conducted on **8 May 2023** and included the following search terms:

Lexmark	Lexmark Multi Function Printer,	CX730, CX930, CX931, MX931
CXTPC, CXTMM, MXTPM	Infineon OPTIGA Trusted Platform Module, Infineon OPTIGA TPM, SLB9672 2.0	PCL 5e, PCL 6
PPDS	PostScript 3	PDF 1.7
Direct Image	AirPrint	apache 2.4.52
apr 1.7.0	apr-util	ethtool 5.4
expat 2.2.9	freetype 2.10.1	Iproute2 5.5.0
iptables 1.8.4	openssh 8.2p1	openssl 1.1.1l
openssl 1.0.2	openssl-fips 2.0.12	panel-apps
panel-drivers	panel-headers	panel-libs
strongswan 5.7.1	stunnel 5.57	usbutils 012
081.234		

Vulnerability searches were conducted using the following sources:

NIST National Vulnerabilities Database https://web.nvd.nist.gov/view/vuln/search	Lexmark Security Advisories https://www.lexmark.com/en_us/solutions/security/lexmark-security-advisories.html

6.4.1   VULNERABILITY ANALYSIS RESULTS

The vulnerability analysis did not uncover any security relevant residual exploitable vulnerabilities in the intended operating environment.

7 RESULTS OF THE EVALUATION

The Information Technology (IT) product identified in this certification report, and its associated certificate, has been evaluated at an approved testing laboratory established under the Canadian Centre for Cyber Security. This certification report, and its associated certificate, apply only to the specific version and release of the product in its evaluated configuration.

This evaluation has provided the basis for the conformance claim documented in Table 1. The overall verdict for this evaluation is **PASS**. These results are supported by evidence in the ETR.

7.1 RECOMMENDATIONS/COMMENTS

It is recommended that all guidance outlined in Section 4.1 be followed to configure the TOE in the evaluated configuration.
8 SUPPORTING CONTENT

8.1 LIST OF ABBREVIATIONS

Term	Definition
CAVP	Cryptographic Algorithm Validation Program
CCTL	Common Criteria Testing Laboratory
CSE	Communications Security Establishment
EAL	Evaluation Assurance Level
ETR	Evaluation Technical Report
IT	Information Technology
ITS	Information Technology Security
PP	Protection Profile
SFR	Security Functional Requirement
ST	Security Target
TOE	Target of Evaluation
TSF	TOE Security Function
