

COMMON CRITERIA CERTIFICATION REPORT

McAfee VirusScan Enterprise 8.8 and ePolicy Orchestrator 5.1.3

v1.0

9 May 2016

FOREWORD

This certification report is an UNCLASSIFIED publication, issued under the authority of the Chief, Communications Security Establishment (CSE). Suggestions for amendments should be forwarded through departmental communications security channels to your Client Services Representative at CSE.

The Information Technology (IT) product identified in this certification report, and its associated certificate, has been evaluated at an approved evaluation facility – established under the Canadian Common Criteria Scheme – using the Common Methodology for Information Technology Security Evaluation, Version 3.1 Revision 4, for conformance to the Common Criteria for Information Technology Security Evaluation, Version 3.1 Revision 4. This certification report, and its associated certificate, applies only to the identified version and release of the product in its evaluated configuration. The evaluation has been conducted in accordance with the provisions of the Canadian CC Scheme, and the conclusions of the evaluation facility in the evaluation report are consistent with the evidence adduced. This report, and its associated certificate, are not an endorsement of the IT product by the Communications Security Establishment, or any other organization that recognizes or gives effect to this report, and its associated certificate, and no warranty for the IT product by the Communications Security Establishment, or any other organization that recognizes or gives effect to this report, and its associated certificate, is either expressed or implied.

If your department has identified a requirement for this certification report based on business needs and would like more detailed information, please contact:

ITS Client Services

Telephone: (613) 991-7654

E-mail: itsclientservices@cse-cst.gc.ca

OVERVIEW

The Canadian Common Criteria Scheme provides a third-party evaluation service for determining the trustworthiness of Information Technology (IT) security products. Evaluations are performed by a commercial Common Criteria Evaluation Facility (CCEF) under the oversight of the Certification Body, which is managed by the Communications Security Establishment.

A CCEF is a commercial facility that has been approved by the Certification Body to perform Common Criteria evaluations; a significant requirement for such approval is accreditation to the requirements of ISO/IEC 17025:2005, the General Requirements for the Competence of Testing and Calibration Laboratories. Accreditation is performed under the Program for the Accreditation of Laboratories - Canada (PALCAN), administered by the Standards Council of Canada.

The CCEF that carried out this evaluation is CGI IT Security Evaluation & Test Facility.

By awarding a Common Criteria certificate, the CCS Certification Body asserts that the product complies with the security requirements specified in the associated security target. A security target is a requirements specification document that defines the scope of the evaluation activities. The consumer of certified IT products should review the security target, in addition to this certification report, in order to gain an understanding of any assumptions made during the evaluation, the IT product's intended environment, the evaluated security functionality, and the testing and analysis conducted by the CCEF.

The certification report, certificate of product evaluation and security target are posted to the Certified Products list (CPL) for the Canadian CC Scheme, and to the Common Criteria portal (the official website of the International Common Criteria Project).

EXECUTIVE SUMMARY

McAfee VirusScan Enterprise 8.8 and ePolicy Orchestrator 5.1.3 (hereafter referred to as the Target of Evaluation (TOE)), from Intel Corporation, was the subject of this Common Criteria evaluation. The results of this evaluation demonstrate that TOE meets the requirements of the conformance claim listed in Table 1 for the evaluated security functionality.

The TOE is a software package designed to protect Microsoft Windows-based desktop and server computers from viruses, worms, trojans, as well as unwanted code and programs. The TOE can be configured to scan local and network drives, as well as Microsoft Outlook and Lotus Notes email messages and attachments. It is possible to configure the TOE to respond to infections and malicious code that it finds by identifying the intrusive entities, removing them, and reporting on them.

The management capabilities for the TOE are provided by the ePolicy Orchestrator (ePO). ePO manages McAfee Agents and VSE software that reside on client systems. By using ePO you can manage a large enterprise network from a centralized system. ePO also provides scheduling capabilities to distribute updated the TOE security policies and maintains audit files.

CGI IT Security Evaluation & Test Facility is the CCEF that conducted the evaluation. This evaluation was completed on 9 May 2016 and was carried out in accordance with the rules of the Canadian Common Criteria Scheme.

The scope of the evaluation is defined by the security target, which identifies assumptions made during the evaluation, the intended environment for TOE, and the security functional/assurance requirements. Consumers are advised to verify that their operating environment is consistent with that specified in the security target, and to give due consideration to the comments, observations and recommendations in this certification report.

Communications Security Establishment, as the Certification Body, declares that the TOE evaluation meets all the conditions of the Arrangement on the Recognition of Common Criteria Certificates and that the product will be listed on the Certified Products list (CPL) and the Common Criteria portal (the official website of the International Common Criteria Project).

1 IDENTIFICATION OF TARGET OF EVALUATION

The Target of Evaluation (TOE) is identified as follows:

Table 1 TOE Identification

TOE Name and Version	McAfee VirusScan Enterprise 8.8 and ePolicy Orchestrator 5.1.3
Developer	Intel Corporation
Conformance Claim	EAL 2+ (ALC_FLR.2)

1.1 COMMON CRITERIA CONFORMANCE

The evaluation was conducted using the Common Methodology for Information Technology Security Evaluation, Version 3.1 Revision 4, for conformance to the Common Criteria for Information Technology Security Evaluation, Version 3.1 Revision 4.

1.2 TOE DESCRIPTION

The TOE is a software package designed to protect Microsoft Windows-based desktop and server computers from viruses, worms, trojans, as well as unwanted code and programs. The TOE can be configured to scan local and network drives, as well as Microsoft Outlook and Lotus Notes email messages and attachments. It is possible to configure the TOE to respond to infections and malicious code that it finds by identifying the intrusive entities, removing them, and reporting on them.

The management capabilities for the TOE are provided by the ePolicy Orchestrator (ePO). ePO manages McAfee Agents and VSE software that reside on client systems. By using ePO you can manage a large enterprise network from a centralized system. ePO also provides scheduling capabilities to distribute updated the TOE security policies and maintains audit files.

1.3 TOE ARCHITECTURE

A diagram of the TOE architecture is as follows:

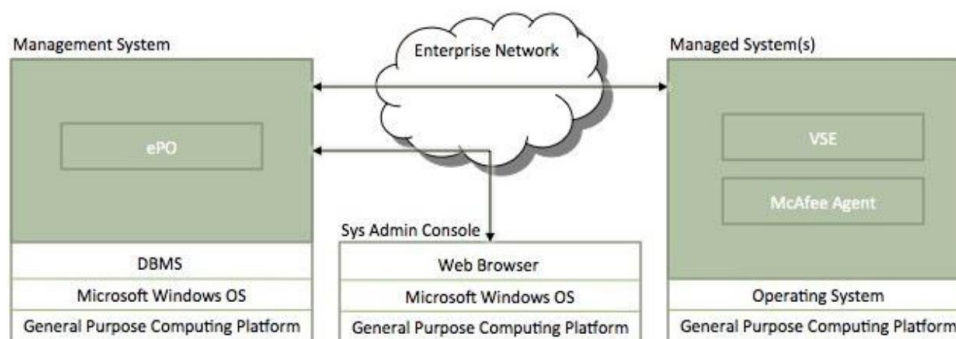

Figure 1 TOE Architecture

2 SECURITY POLICY

The TOE implements policies pertaining to the following security functional classes:

- Virus Scanning and Alerts
- Identification & Authentication
- Audit
- Management
- Cryptographic Operation

2.1 CRYPTOGRAPHIC FUNCTIONALITY

The following cryptographic modules were evaluated by the CMVP:

Table 2 Cryptographic Module(s)

Cryptographic Module	Certificate Number
OpenSSL FIPS Object Module (v2.0.8)	#1747
RSA BSAFE(R) Crypto-C Micro Edition (v4.0.1)	#2097

3 ASSUMPTIONS AND CLARIFICATIONS OF SCOPE

Consumers of the TOE should consider assumptions about usage and environmental settings as requirements for the product's installation and its operating environment. This will ensure the proper and secure operation of the TOE.

3.1 USAGE AND ENVIRONMENTAL ASSUMPTIONS

The following assumptions are made regarding the use and deployment of the TOE:

- Administrators will back up audit files and monitor disk usage to ensure audit information is not lost.
- Administrators are non-hostile, appropriately trained, and follow all administrative guidance.
- It is assumed that the appropriate physical security is provided within the domain for the value of the IT assets protected by the TOE and the value of the stored, processed, and transmitted information.

3.2 CLARIFICATION OF SCOPE

The following product functionality was not included within the scope of this evaluation;

- The ability to protect against buffer overflows
- The ability to identify spyware
- The Scriptscan feature that scans JavaScript and VBScript scripts
- The ability to update the TOE (scan engine). Note that the ability to update the virus signatures (DAT file) is included in the evaluation.
- The optional Alert Manager product

4 EVALUATED CONFIGURATION

The evaluated configuration for the TOE comprises:

- The following TOE software installed on GPCs;
 - VSE 8.8 Patch 6
 - Running on Windows Server 2008 R2 or Server 2012 R2
 - ePolicy Orchestrator 5.1.3
 - Running on Windows Server 2008 R2
 - McAfee Agent 5.0.2
 - Running on Windows Server 2008 R2, Server 2012 R2, Windows 7, Windows 8.1
- With support from the following component in the environment;
 - Microsoft SQL Server 2008 R2

4.1 DOCUMENTATION

The following documents are provided to the consumer to assist in the configuration and installation of the TOE:

- a. Product Guide: McAfee VirusScan Enterprise 8.8 software
- b. Installation Guide: McAfee VirusScan Enterprise 8.8 software
- c. Product Guide: McAfee ePolicy Orchestrator 5.1.0 Software (Revision B)
- d. Product Guide: McAfee Agent 5.0.1 For use with McAfee ePolicy Orchestrator
- e. Installation Guide: McAfee ePolicy Orchestrator 5.1.0 Software (Revision B)
- f. Operational User Guidance and Preparative Procedures Guidance Addendum: McAfee VirusScan Enterprise 8.8 and ePolicy Orchestrator 5.1.3, v1.1, 6 May 2016

5 EVALUATION ANALYSIS ACTIVITIES

The evaluation analysis activities involved a structured evaluation of the TOE. Documentation and process dealing with Development, Guidance Documents, and Life-Cycle Support were evaluated.

5.1 DEVELOPMENT

The evaluators analyzed the TOE functional specification and design documentation; they determined that the design completely and accurately describes the TOE security functionality (TSF) interfaces, the TSF subsystems and how the TSF implements the security functional requirements (SFRs). The evaluators analyzed the TOE security architectural description and determined that the initialization process is secure, that the security functions are protected against tamper and bypass, and that security domains are maintained. The evaluators also independently verified that the correspondence mappings between the design documents are correct.

5.2 GUIDANCE DOCUMENTS

The evaluators examined the TOE preparative user guidance and operational user guidance and determined that it sufficiently and unambiguously describes how to securely transform the TOE into its evaluated configuration and how to use and administer the product. The evaluators examined and tested the preparative and operational guidance, and determined that they are complete and sufficiently detailed to result in a secure configuration.

Section 4.1 provides details on the guidance documents.

5.3 LIFE-CYCLE SUPPORT

An analysis of the TOE configuration management system and associated documentation was performed. The evaluators found that the TOE configuration items were clearly marked.

The evaluators examined the delivery documentation and determined that it described all of the procedures required to maintain the integrity of the TOE during distribution to the consumer.

The evaluators reviewed the flaw remediation procedures used by developer for the TOE. During a site visit, the evaluators also examined the evidence generated by adherence to the procedures. The evaluators concluded that the procedures are adequate to track and correct security flaws, and distribute the flaw information and corrections to consumers of the TOE.

6 TESTING ACTIVITIES

Testing consists of the following three steps: assessing developer tests, performing independent functional tests, and performing penetration tests.

6.1 ASSESSMENT OF DEVELOPER TESTS

The evaluators verified that the developer has met their testing responsibilities by examining their test evidence, and reviewing their test results, as documented in the ETR.

The evaluators analyzed the developer's test coverage analysis and found it to be complete and accurate. The correspondence between the tests identified in the developer's test documentation and the functional specification was complete.

6.2 CONDUCT OF TESTING

The TOE was subjected to a comprehensive suite of formally documented, independent functional and penetration tests. The detailed testing activities, including configurations, procedures, test cases, expected results and observed results are documented in a separate Test Results document.

6.3 INDEPENDENT FUNCTIONAL TESTING

During this evaluation, the evaluator developed independent functional tests by examining design and guidance documentation.

All testing was planned and documented to a sufficient level of detail to allow repeatability of the testing procedures and results. The following testing activities were performed:

- a. Repeat of Developer's Tests: The evaluator repeated a subset of the developers tests;
- b. File-based virus scan: The evaluator exercised the Real-time and schedule scan capabilities of the TOE for file-based viruses;
- c. Management of security functions: The evaluator confirmed that the TOE correctly implements the functionality claimed in FMT_MOF.1; and
- d. TSF data management: The evaluator exercised the capability of the TOE to properly manage TSF data.

6.3.1 FUNCTIONAL TEST RESULTS

The developer's tests and the independent functional tests yielded the expected results, providing assurance that the TOE behaves as specified in its ST and functional specification.

6.4 INDEPENDENT PENETRATION TESTING

Subsequent to the independent review of public domain vulnerability databases and all evaluation deliverables, limited independent evaluator penetration testing was conducted. The penetration tests focused on:

- a. Use of automated vulnerability scanning tools to discover potential network, platform and application layer vulnerabilities such as Heartbleed, Shellshock, FREAK, POODLE, and GHOST and;
- b. Session management: The evaluator attempted to access closed admin sessions using the Back/Forward browser buttons.

6.4.1 PENETRATION TEST RESULTS

The independent penetration testing did not uncover any exploitable vulnerabilities in the intended operating environment.

7 RESULTS OF THE EVALUATION

This evaluation has provided the basis for the conformance claim documented in Table 1. The overall verdict for the evaluation is **PASS**. These results are supported by evidence in the ETR.

The IT product identified in this report has been evaluated at an approved evaluation facility established under the Canadian Common Criteria Evaluation and Certification Scheme using the Common Methodology for IT Security Evaluation, Version 3.1 Revision 4, for conformance to the Common Criteria for IT Security Evaluation, Version 3.1 Revision 4. These evaluation results apply only to the specific version and release of the product in its evaluated configuration and in conjunction with the complete certification report.

The evaluation has been conducted in accordance with the provisions of the Canadian Common Criteria Evaluation and Certification Scheme and the conclusions of the evaluation facility in the evaluation report are consistent with the evidence adduced. This is not an endorsement of the IT product by CSE or by any other organization that recognizes or gives effect to this certificate, and no warranty of the IT product by CSE or by any other organization that recognizes or gives effect to this certificate, is expressed or implied.
