Certification No.	C0048
Certification date	2006/6/28
Name of TOE	Remote Communication Gate Application Software
Version of TOE	3.34
TOE category	IT Product (Software for remote service appliance)
Supplier	RICOH COMPANY, LTD.
Contact	Name: Masahiro Itoh Products Planning Department, Division: Products Planning Center, MFP Business Group Tel: +81-3-5742-5765 E-mail: masahiro.itoh@nts.ricoh.co.jp
Conformance claim	EAL3
PP conformance	None
Evaluation Facility	Mizuho Information & Research Institute, Inc. Center for Evaluation of Information Security
Description of TOE	Remote Communication Gate Type N/L/BN1/BM1 (hereafter "RC Gate") is a communication device, which connects an image I/O device to a remote surveillance server. RC Gate is used mostly in business offices and offers the maintenance services such as machine trouble reporting, automatic counter checking, ordering supplies like toner and upgrading firmware for the image I/O device. The TOE is application software embedded in the RC Gate. The security features of RC Gate are identification and authentication of operators, access control facilities for operators, identification and authentication of the remote surveillance server based on a digital certificate, and encrypted communication to protect information from Internet or telephone line threats.
