1. Module Overview

The Mocana Cryptographic Suite B Module (Software Version 5.5f, 5.5.1f) is a software only, multi-chip standalone cryptographic module that runs on a general purpose computer. The primary purpose of this module is to provide FIPS Approved cryptographic routines to consuming applications via an Application Programming Interface. The physical boundary of the module is the case of the general purpose computer. The logical boundary of the cryptographic module is the single shared object (SO).

The cryptographic module runs on the following operating environments:

Table 1 – Operational Environments

| SW Version | Operating System | Platform |
|------------|--|------------------------|
| 5.5f | Android 2.2 (single-user mode) | LG Optimus 3D |
| 5.5f | Android 2.3 (single-user mode) | LG G2X |
| 5.5f | Android 4.0 (single-user mode) | Samsung Nexus-S |
| 5.5f | Android 4.1 (single-user mode) | LG Optimus 3D |
| 5.5f | Ubuntu Linux 32 bit (single-user mode) | Dell Dimension 9200 |
| 5.5f | Ubuntu Linux 64 bit (single-user mode) | Dell Dimension 9200 |
| 5.5.1f | Android 4.3 (single-user mode) | Asus TF 700 Tablet |
| 5.5.1f | Android 4.4 (single-user mode) | Nexus 7 Tablet |
| 5.5.1f | VxWorks 6.8 (single-user mode) | Avaya ERS 4850 |
| 5.5.1f | Mentor Embedded Linux 4.0 (single-user mode) | Avaya VSP 4450 |
| 5.5.1f | Honeywell Xenon RTOS (single-user mode) | Honeywell 1902 Scanner |
| 5.5.1f | Android 6.0 32-bit (single-user mode) | Nexus 7 Tablet |
| 5.5.1f | Android 6.0 64-bit (single-user mode) | Galaxy S6 |

The cryptographic module is also supported on the following operating environments for which operational testing was not performed:

- Linux Kernel version 3.4.0
- Linux Kernel version 3.1.10
- Linux Kernel version 3.0.31
- Linux Kernel version 2.6.32
- Linux Kernel version 3.0.27
- Linux Kernel version 2.6.32.45
- Linux Kernel version 2.6.35.7
- Android 4.2

- Android 5.0
- Mentor Embedded Linux 4.0 running on a Freescale P2020
- Linux Kernel version 3.4.76

Note: the CMVP makes no statement as to the correct operation of the module on the operational environments for which operational testing was not performed.

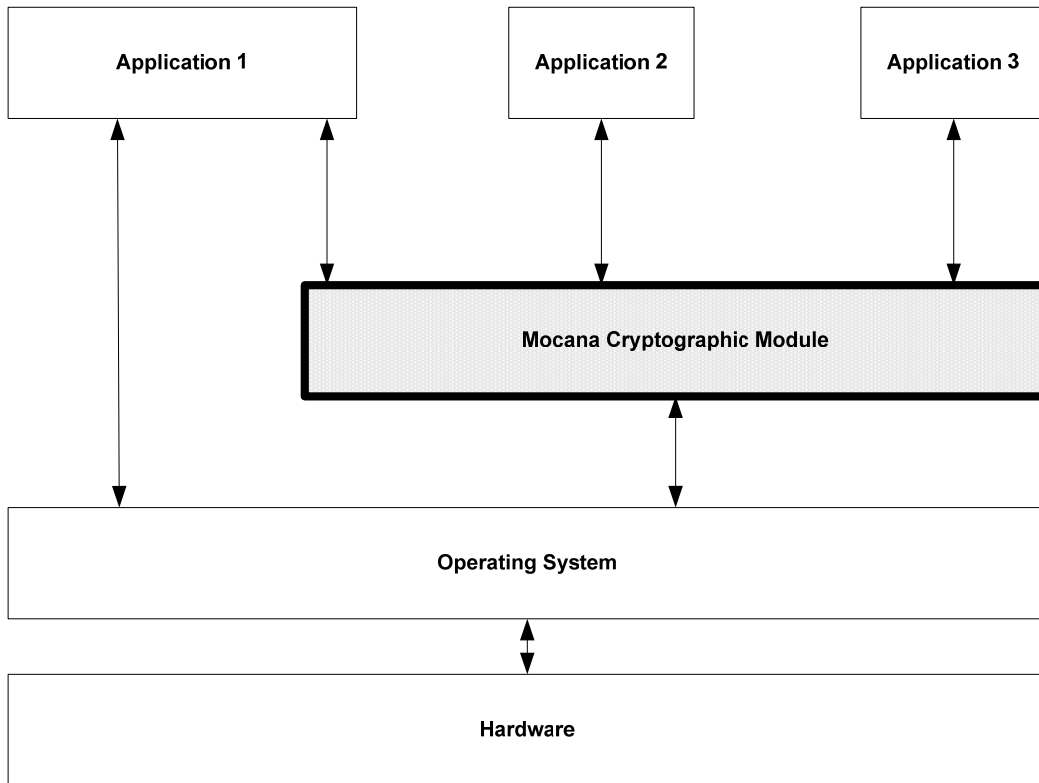

Figure 1 – Cryptographic Module Interface Diagram

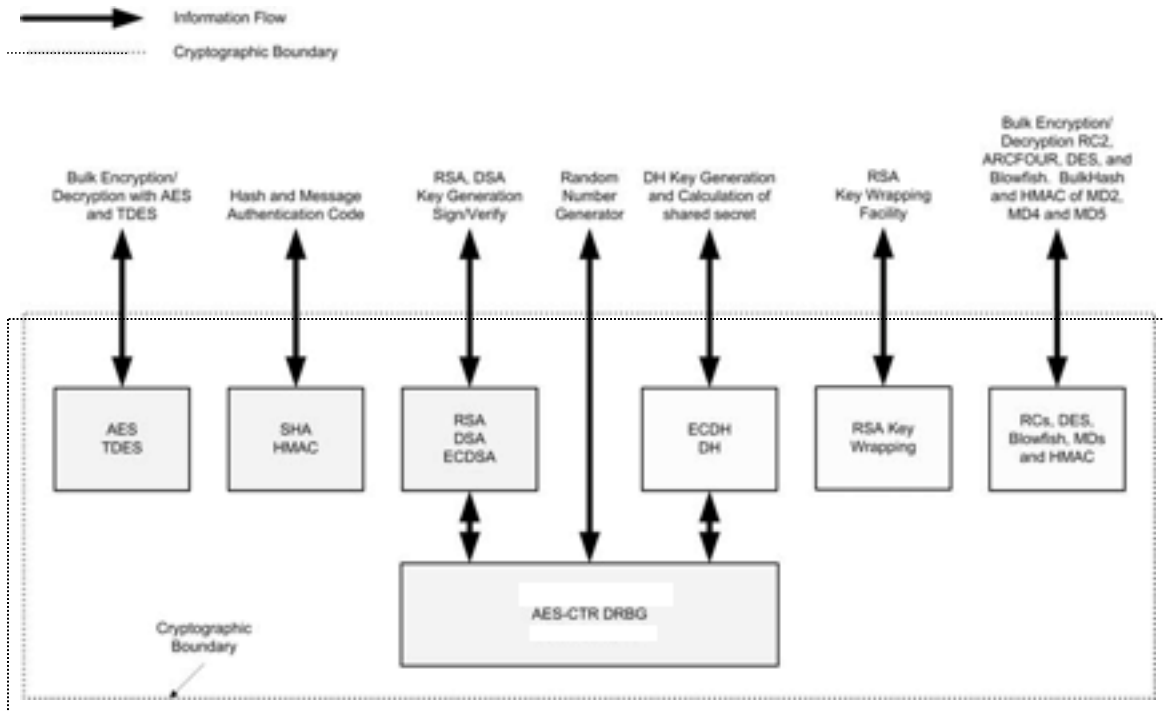

Figure 2 – Logical Cryptographic Boundary

2. Security Level

The cryptographic module meets the overall requirements applicable to Security Level 1 of FIPS 140-2.

Table 2 – Module Security Level Specification

| Security Requirements Section | Level |
|------------------------------------|-------|
| Cryptographic Module Specification | 1 |
| Module Ports and Interfaces | 1 |
| Roles, Services and Authentication | 1 |
| Finite State Model | 1 |
| Physical Security | N/A |
| Operational Environment | 1 |
| Cryptographic Key Management | 1 |
| EMI/EMC | 1 |
| Self-Tests | 1 |
| Design Assurance | 1 |
| Mitigation of Other Attacks | N/A |

3. Modes of Operation

Approved mode of operation

The module supports multiple Approved modes of operation. During module initialization, a consuming application can configure the module to utilize all, or any subset of the following FIPS Approved algorithms:

Table 3 – Algorithms and Software Versions

| Algorithms | Software Version 5.5f | Software Version 5.5.1f |
|--|------------------------|-------------------------|
| AES (ECB, CBC, OFB, CFB, CTR and GCM modes; E/D; 128, 192 and 256) | Certs. #2039 and #2272 | Cert. #2741 |
| AES (CCM, CMAC 128, 192 and 256) | Certs. #2039 and #2272 | Cert. #2741 |
| AES XTS (128 and 256) | Certs. #2039 and #2272 | Cert. #2741 |
| Triple-DES (3-key and 2-key ¹ ; TCBC mode; E/D) | Cert. #1316 | Cert. #1650 |
| HMAC-SHA-1; HMAC-SHA-224; HMAC-SHA-256; HMAC-SHA-384; HMAC-SHA-512 | Cert. #1238 | Cert. #1718 |
| SHA-1 SHA-2: SHA-224; SHA-256; SHA-384; SHA-512 | Cert. #1785 | Cert. #2313 |
| FIPS 186-2 RSA: - ANSI X9.31 key generation: 2048, 3072, and 4096-bit - PKCS #1 1.5 and PSS signature generation: 2048, 3072, and 4096-bit using SHA-2 - PKCS #1 1.5 and PSS signature verification: 1024, 1536, 2048, 3072, and 4096-bit using SHA-1 and SHA-2 | Cert. #1059 | Cert. #1437 |
| FIPS 186-2 DSA: - PQG Ver: 1024-bit using SHA-1 - Sig Ver: 1024-bit using SHA-1 | Cert. #647 | Cert. #840 |
| FIPS 186-2 ECDSA: Key Gen: CURVES P; 224, 256, 384, 521 Sig Ver: CURVES P; 192, 224, 256, 384, 521 using SHA-1 PKV: CURVES P; 192, 224, 256, 384, 521 using SHA-1 | Cert. #298 | Cert. #479 |
| AES-CTR based DRBG | Cert. #201 | Cert. #460 |

Non-FIPS Approved Algorithms

Within the FIPS Approved mode of operation, the module supports the following allowed algorithms:

¹ Per NIST SP 800-131A: Through December 31, 2015, the use of 2-key Triple DES for encryption is restricted: the total number of blocks of data encrypted with the same cryptographic key shall not be greater than 2²⁰. After December 31, 2015, 2-key Triple DES shall not be used for encryption. Decryption using 2-key Triple DES is allowed for legacy-use.

- Diffie-Hellman (key agreement; key establishment methodology provides 112 bits of encryption strength)
- RSA (key wrapping; key establishment methodology provides between 112 and 128 bits of encryption strength)
- EC Diffie Hellman (key agreement; key establishment methodology provides between 112 and 256 bits of encryption strength)
- NDRNG – Used to seed the Approved DRBGs

Non-FIPS Approved mode:

In addition to the above algorithms, the following algorithms are available in the non-FIPS Approved mode of operation:

- DES, Blowfish, ARC2, ARC4, MD2, MD4, MD5, HMAC-MD5, AES EAX, AES XCBC
- RSA PKCS #1 v2.1 RSAES-OAEP encryption/decryption
- FIPS 186-2 RNG, Dual EC DRBG

The following algorithms are Disallowed as of January 1, 2014 per the NIST SP 800-131A algorithm transitions:

- FIPS 186-2 RSA (Certs. #1059 and #1437)
 - ANSI X9.31 key generation: 1024 and 1536-bit
 - PKCS #1 1.5 and PSS signature generation: 1024 and 1536-bit using SHA-1 and SHA-2; 2048, 3072 and 4096-bit using SHA-1
- FIPS 186-2 DSA using SHA-1 (Certs. #647 and 840)
 - PQG generation: 1024-bit
 - Key generation: 1024-bit
 - Signature generation: 1024-bit
- FIPS 186-2 ECDSA using SHA-1 (Certs. #298 and #479)
 - Signature generation: P-192, P-224 P-256, P-384, P521 curves
 - Key generation: P-192 curve
- Diffie-Hellman (key agreement; key establishment methodology provides 80 bits of encryption strength; non-compliant)
- RSA (key wrapping; key establishment methodology provides less than 112 bits of encryption strength; non-compliant)
- EC Diffie Hellman (key agreement; key establishment methodology provides less than 112 bits of encryption strength; non-compliant)

During operation, the module can switch service by service between an Approved mode of operation and a non-Approved mode of operation. The module will transition to the non-Approved mode of operation when one of the above non-Approved security functions is utilized in lieu of an Approved one. The module can transition back to the Approved mode of operation by utilizing an Approved security function.

4. Ports and Interfaces

The physical ports of the module are provided by the general purpose computer on which the module is installed. The logical interfaces are defined as the API of the cryptographic module. The module's API supports the following logical interfaces: data input, data output, control input, and status output.

5. Identification and Authentication Policy

Assumption of roles

The Mocana Cryptographic Suite B Module shall support two distinct roles (User and Cryptographic Officer). The cryptographic module does not provide any identification or authentication methods of its own. The Cryptographic Officer and the User roles are implicitly assumed based on the service requested.

Table 4 – Roles and Required Identification and Authentication

| Role | Type of Authentication | Authentication Data |
|-----------------------|-------------------------------|----------------------------|
| User | N/A | N/A |
| Cryptographic Officer | N/A | N/A |

6. Access Control Policy

Roles and Services

Table 5 – Services Authorized for Use in the Approved modes of operation

| Role | Authorized Services |
|-----------------------|--|
| User | <ul style="list-style-type: none"> • Self-tests • Show Status • Read Version |
| Cryptographic-Officer | <ul style="list-style-type: none"> • DH Key Generation • DH Key Exchange • ECDH Key Exchange • RSA Key Generation • RSA Signature Generation • RSA Signature Verification • RSA Key Wrapping Encryption • RSA Key Wrapping Decryption • DSA Key Generation • DSA Signature Generation • DSA Signature Verification • ECDSA Key Generation • ECDSA Signature Generation • ECDSA Signature Verification • AES Encryption • AES Decryption • AES Message Authentication Code • TDES Encryption • TDES Decryption • SHA-1 • SHA-224/256 • SHA-384/512 • HMAC-SHA1 Message Authentication Code • HMAC-SHA224/256 Message Authentication Code • HMAC-SHA384/512 Message Authentication Code • AES-CTR DRBG Random Number Generation • Key Destruction |

Note: The module may be configured to support only a subset of the Approved security functions listed in Section 3 above. In this case, not all of the services listed in Table 3 would be available.

Other Services

Table 6 – Services Authorized for Use in the non-Approved mode of operation

| Role | Authorized Services |
|-----------------------|---|
| User | <ul style="list-style-type: none"> • Self-tests • Show Status • Read Version |
| Cryptographic-Officer | <ul style="list-style-type: none"> • DES Encryption • DES Decryption • AES Message Authentication Code • Blowfish Encryption • Blowfish Decryption • ARC2, ARC4 Encryption • ARC2, ARC4 Decryption • MD2 Hash • MD4 Hash • MD5 Hash • HMAC-MD5 Message Authentication Code • AES EAX Encryption • AES EAX Decryption • AES XCBC Encryption • AES XCBC Decryption • RSA PKCS #1 v2.1 RSAES-OAEP Encryption • RSA PKCS #1 v2.1 RSAES-OAEP Decryption • FIPS 186-2 Random Number Generation • Dual EC DRBG Random Number Generation |

The cryptographic module supports the following service that does not require an operator to assume an authorized role:

- Self-tests: This service executes the suite of self-tests required by FIPS 140-2. It is invoked by reloading the library into executable memory.

Definition of Critical Security Parameters (CSPs)

The following are CSPs that may be contained in the module:

Table 7 – CSP Information

| Key | Description/Usage | Generation | Storage | Entry / Output | Destruction |
|------------------------------|--|--|-----------------------------|---|---|
| DH Private Components | Used to derive the secret session key during DH key agreement protocol | Internally using the AES-CTR DRBG | Temporarily in volatile RAM | N/A | An application program which uses the API may destroy the key. The Key Destruction service zeroizes this CSP. |
| ECDH Private Components | Used to derive the secret session key during ECDH key agreement protocol | Internally using the AES-CTR DRBG | Temporarily in volatile RAM | N/A | An application program which uses the API may destroy the key. The Key Destruction service zeroizes this CSP. |
| Seed and Seed Keys | Used to seed the DRBG for key generation | Internally via NDRNG or externally | Temporarily in volatile RAM | Entry: Plaintext if generated externally Output: N/A | Automatically after use |
| RSA Private Key | Used to create RSA digital signatures | May be generated internally using the AES-CTR DRBG or generated externally | Temporarily in volatile RAM | Entry: Plaintext if generated externally Output: Plaintext | An application program which uses the API may destroy the key. The Key Destruction service zeroizes this CSP. |
| RSA Key Wrapping Private Key | Used for RSA Key Wrapping decryption operation | May be generated internally using the AES-CTR DRBG or generated externally | Temporarily in volatile RAM | Entry: Plaintext if generated externally Output: Plaintext | An application program which uses the API may destroy the key. The Key Destruction service zeroizes this CSP. |
| DSA Private Key | Used to create DSA digital signatures | May be generated internally using the AES-CTR DRBG or generated externally | Temporarily in volatile RAM | Entry: Plaintext if generated externally Output: Plaintext | An application program which uses the API may destroy the key. The Key Destruction service zeroizes this CSP. |
| ECDSA Private Key | Used to create DSA digital signatures | May be generated internally using the AES-CTR DRBG or generated externally | Temporarily in volatile RAM | Entry: Plaintext if generated externally Output: Plaintext | An application program which uses the API may destroy the key. The Key Destruction service zeroizes this CSP. |

| Key | Description/Usage | Generation | Storage | Entry / Output | Destruction |
|------------|---|-------------------|-----------------------------|---------------------------------|---|
| TDES Key | Used during TDES encryption and decryption | Externally. | Temporarily in volatile RAM | Entry: Plaintext Output: N/A | An application program which uses the API may destroy the key. The Key Destruction service zeroizes this CSP. |
| AES Keys | Used during AES encryption, decryption, and CMAC operations | Externally. | Temporarily in volatile RAM | Entry: Plaintext Output: N/A | An application program which uses the API may destroy the key. The Key Destruction service zeroizes this CSP. |
| HMAC Keys | Used during HMAC-SHA-1, 224, 256, 384, 512 operations | Externally. | Temporarily in volatile RAM | Entry: Plaintext Output: N/A | An application program which uses the API may destroy the key. The Key Destruction service zeroizes this CSP. |

Definition of Public Keys:

The following are the public keys contained in the module:

Table 8 – Public Key Information

| Key | Description/Usage | Generation | Storage | Entry/Output |
|------------------------------|--|--|-----------------------------|---|
| DH Public Component | Used to derive the secret session key during DH key agreement protocol | Internally using the AES-CTR DRBG | Temporarily in volatile RAM | Entry: Receive Client Public Component during DH exchange. Output: Transmit Host Public Component during DH exchange |
| ECDH Public Component | Used to derive the secret session key during ECDH key agreement protocol | Internally using the AES-CTR DRBG | Temporarily in volatile RAM | Entry: Receive Client Public Component during DH exchange. Output: Transmit Host Public Component during DH exchange |
| RSA Public Keys | Used to verify RSA signatures | May be generated internally using the AES-CTR DRBG or generated externally | Temporarily in volatile RAM | Input: Plaintext if generated externally t Output: Plaintext |
| RSA Key Wrapping Public Keys | Used for RSA Key Wrapping encryption operation | May be generated internally using the AES-CTR DRBG or generated externally | Temporarily in volatile RAM | Input: Plaintext if generated externally Output: Plaintext |
| DSA Public Keys | Used to verify DSA signatures | May be generated internally using the AES-CTR DRBG or generated externally | Temporarily in volatile RAM | Input: Plaintext if generated externally Output: Plaintext |
| ECDSA Public Keys | Used to verify ECDSA signatures | May be generated internally using the AES-CTR DRBG or generated externally | Temporarily in volatile RAM | Input: Plaintext if generated externally Output: Plaintext |

Definition of CSPs Modes of Access

Table 6 defines the relationship between access to CSPs and the different module services.

Table 9 – CSP Access Rights within Roles & Services

| Role | | Service | Cryptographic Keys and CSPs Access Operation |
|------|------|------------------------------|---|
| C.O. | User | | |
| X | | DH Key Generation | Use DH Parameters Generate DH Key pair |
| X | | DH Key Exchange | Use DH Private Component Generate DH shared secret |
| X | | ECDH Key Exchange | Use ECDH Private Component Generate ECDH shared secret |
| X | | RSA Key Generation | Generate RSA Public/Private Key pair |
| X | | RSA Signature Generation | Use RSA Private Key Generate RSA Signature |
| X | | RSA Signature Verification | Use RSA Public Key Verify RSA Signature |
| X | | RSA Key Wrapping Encryption | Use RSA Public Key Performs Key Wrapping Encryption |
| X | | RSA Key Wrapping Decryption | Use RSA Private Key Performs Key Wrapping Decryption |
| X | | DSA Key Generation | Generate DSA Key Pair for Signature Generation/Verification |
| X | | DSA Signature Generation | Use DSA Private Key Generate DSA Signature |
| X | | DSA Signature Verification | Use DSA Public Key Verify DSA Signature |
| X | | ECDSA Key Generation | Generate ECDSA Key Pair for Signature Generation/Verification |
| X | | ECDSA Signature Generation | Use DSA Private Key Generate ECDSA Signature |
| X | | ECDSA Signature Verification | Use ECDSA Public Key Verify ECDSA Signature |
| X | | AES Encryption | Use AES Key |
| X | | AES Decryption | Use AES Key |
| X | | AES Message Authentication | Use AES Key |

| Role | | Service | Cryptographic Keys and CSPs Access Operation |
|------|------|--|--|
| C.O. | User | | |
| | | Code | |
| X | | TDES Encryption | Use TDES Key |
| X | | TDES Decryption | Use TDES Key |
| X | | SHA-1 | Generate SHA-1 Output; no CSP access |
| X | | SHA-224/256 | Generate SHA-224/256 Output; no CSP access |
| X | | SHA-384/512 | Generate SHA-384/512 Output; no CSP access |
| X | | HMAC-SHA-1 Message Authentication Code | Use HMAC-SHA-1 Key Generate HMAC-SHA-1 Output |
| X | | HMAC-SHA- 224/256 Message Authentication Code | Use HMAC-SHA-224/256 Key Generate HMAC-SHA-224/256 Output |
| X | | HMAC-SHA- 384/512 Message Authentication Code | Use HMAC-SHA-384/512 Key Generate HMAC-SHA-384/512 Output |
| X | | AES-CTR DRBG Random Number Generation | Use Seed Key to generate random number Destroy Seed Key after use |
| X | | Key Destruction | Destroy All CSPs |
| | X | Show Status | N/A |
| | X | Self-Tests | N/A |

7. Operational Environment

The FIPS 140-2 Area 6 Operational Environment requirements are applicable because the Mocana Cryptographic Suite B Module operates in a modifiable operational environment. Please refer to Table 1 for a list of environments for which operational testing of the module was performed.

8. Security Rules

The Mocana Cryptographic Suite B Module design corresponds to the following security rules. This section documents the security rules enforced by the cryptographic module to implement the security requirements of this FIPS 140-2 Level 1 module.

1. The cryptographic module shall provide two distinct roles. These are the User role and the Cryptographic Officer role.
2. The cryptographic module does not provide any operator authentication.
3. The cryptographic module shall encrypt/decrypt message traffic using the Triple-DES or AES algorithms.
4. The cryptographic module shall perform the following self-tests:

Power-up Self-Tests:

- Cryptographic Algorithm Tests:
 - AES-ECB, CBC, OFB, CFB, CCM, CMAC, CTR, GCM, and XTS Known Answer Test
 - Triple-DES Known Answer Test
 - HMAC-SHA-1 Known Answer Test
 - HMAC-SHA-224 Known Answer Test
 - HMAC-SHA-256 Known Answer Test
 - HMAC-SHA-384 Known Answer Test
 - HMAC-SHA-512 Known Answer Test
 - SHA-1 Known Answer Test
 - SHA-224 Known Answer Test
 - SHA-256 Known Answer Test
 - SHA-384 Known Answer Test
 - SHA-512 Known Answer Test
 - RSA Encrypt/Decrypt Known Answer Test
 - RSA Sign/Verify Known Answer Test
 - DSA Pairwise Consistency Test
 - ECDSA Pairwise Consistency Test
 - ECDH Pairwise Consistency Test
 - DH Pairwise Consistency Test
 - AES-CTR DRBG Known Answer Test

- Software Integrity Test: HMAC-SHA-1
- Critical Functions Tests: N/A

Conditional Tests:

- DSA Pairwise Consistency Test
- RSA Pairwise Consistency Test
- ECDSA Pairwise Consistency Test
- FIPS 186-2 RNG Continuous Test
- AES-CTR DRBG Continuous Test
- Dual EC DRBG Continuous Test
- NDRNG Continuous Test

The module can be configured to utilize all or only a subset of the Approved security functions listed in Section 3 above. Only the self-tests of the algorithms that are to be utilized will be run at power up. Upon re-configuration from one Approved mode of operation to another, the module will reinitialize and perform all power-up self-tests associated with the new Approved mode of operation.

5. At any time, the operator shall be capable of commanding the module to perform the power-up self-tests by reloading the cryptographic module into memory.
6. The cryptographic module is available to perform services only after successfully completing the power-up self-tests.
7. Data output shall be inhibited during key generation, self-tests, zeroization, and error states.
8. Status information shall not contain CSPs or sensitive data that if misused could lead to a compromise of the module.
9. In the event of a self-test failure, the module will enter an error state and a specific error code will be returned indicating which self-test or conditional test has failed. The module will not provide any cryptographic services while in this state.
10. The module shall not support concurrent operators.
11. DES, Blowfish, ARC2, ARC4, MD2, MD4, MD5, HMAC-MD5, AES EAX, AES XCBC, FIPS 186-2 RNG, Dual EC DRBG, and RSA PKCS #1 v2.1 RSAES-OAEP encryption/decryption are not allowed for use in the FIPS Approved mode of operation. When these algorithms are used, the module is no longer operating in the FIPS Approved mode of operation. It is the responsibility of the consuming application to zeroize all keys and CSPs prior to and after utilizing these non-Approved algorithms. CSPs shall not be shared between the Approved and non-Approved modes of operation.

9. Physical Security

The FIPS 140-2 Area 5 Physical Security requirements are not applicable because the Mocana Cryptographic Suite B Module is software only.

10. Mitigation of Other Attacks Policy

The module has not been designed to mitigate any specific attacks outside the scope of FIPS 140-2 requirements.

11. Cryptographic Officer Guidance

The operating system running the Mocana Cryptographic Suite B Module must be configured in a single-user mode of operation.

Key Destruction Service

There is a context structure associated with every cryptographic algorithm available in this module. Context structures hold sensitive information such as cryptographic keys. These context structures must be destroyed via respective API calls when the application software no longer needs to use a specific algorithm any more. This API call will zeroize all sensitive information including cryptographic keys before freeing the dynamically allocated memory. See the *Mocana Cryptographic API Reference* for additional information.
